

Missing Data Field Triage Policy

Synthetic Training Policy - Non-PHI

Defines the triage priority for claims submitted with missing required fields. Directly informs `is_procedure_missing`, `is_amount_missing`, `provider_location_missing`, and the composite `missing_fields_count` feature.

Policy ID	CLAIMOPS-POL-009
Effective Date	2026-04-25
Applies To	Synthetic claims, provider, diagnosis, and cost datasets in this repository
Source Type	Locally generated demo policy; not a real payer coverage policy

Policy Summary

- Missing critical fields prevent claim validation and must be resolved before payer submission.
- `missing_fields_count` aggregates the total number of absent required fields on a single claim.
- `procedure_code` is the highest-priority field — without it, no coding, pricing, or medical review is possible.
- `billed_amount` is the second-priority field — without it, no cost benchmarking or payment calculation is possible.
- `provider_location` is operational metadata — missing location does not block processing but prevents regional benchmarking.

Rules

Rule ID	Requirement
MISS-01	<code>missing_fields_count</code> = 0: All required fields present. Standard processing.
MISS-02	<code>missing_fields_count</code> = 1: Single field missing. Route to field-specific remediation queue. Priority determined by which field is missing.
MISS-03	<code>missing_fields_count</code> >= 2: Multiple fields missing. High-priority case. Route to supervisor review. Do not submit to payer until all critical fields are resolved.
MISS-04	<code>is_procedure_missing</code> = 1: <code>procedure_code</code> is blank. Claim cannot be priced, coded, or medically reviewed. HIGHEST priority. Route to coding review immediately. Expected denial reason: MISSING_PROCEDURE.
MISS-05	<code>is_amount_missing</code> = 1: <code>billed_amount</code> is blank. Claim cannot be benchmarked against <code>expected_cost</code> or <code>average_cost</code> . SECOND priority. Route to charge entry review. Expected denial reason: MISSING_BILLED_AMOUNT.
MISS-06	<code>provider_location_missing</code> = 1: <code>provider_location</code> is blank. Operational data quality issue. Impute as Unknown for analytics. LOWEST priority. Does not independently cause denial but contributes to <code>missing_fields_count</code> .

Remediation Guidance

- Triage claims by `missing_fields_count` first, then by which specific fields are absent.
- Resolve `procedure_code` gaps before `billed_amount` gaps — coding must happen before pricing.
- For claims missing both `procedure_code` and `billed_amount`, assign to a senior analyst.

- After field completion, re-run the full pre-submission validation pipeline.

RAG Safety Note

This document contains only synthetic policy text. It intentionally avoids patient names, patient identifiers, service dates, and real billed amounts. Use policy_id, rule_id, denial reason, diagnosis category, and procedure status as retrieval metadata.
